

# FOOD PROCESSING SOLUTIONS

Protect your process from unwanted foam with our extensive line of expertly crafted defoamers and antifoam products.

## ▶ FOOD PROCESSING BENEFITS

Our foam control group offers a product line developed around the critical aspects of food contact. Hydrite Chemical Co. has crafted products to eliminate foam which can increase your overall production quotas.

We offer application solutions in fermentation, wet-corn milling, potato processing, dairy production, organic processing, protein extraction and candy processing.

## ▶ FOAM CONTROL PRODUCTS

### Beverage

- **Patcote® 376K** - A specialty product designed to control foam in a variety of nutritive drinks.
- **Suppressor 3110** - A 10% silicone emulsion designed for optimal foam control.

### Cheese & Dairy

- **Suppressor 3583** - Specialty antifoam designed for excellent foam in the production of specialty cheeses such as Romano and others.
- **Suppressor 3112** - A silicone emulsion antifoam designed to combat the tenacious foam found in today's food processing environment. This product has been designed with an innovative emulsification package to create a system that will work in most food processing applications.

### Potato Processing

- **Suppressor 3568** - A proprietary blend of hydrophobes for use in french fry production to control foam from front-end loading to packaging of the fries.
- **MCA 8123S** - A highly active foam control agent designed to not only deliver maximum foam control in potato processing, but be easy to use and require minimal maintenance.
- **Patcote® 507K** - A specialty product designed specifically to control foam in potato chip processing. Works well in all application areas of the potato chip plant.
- **Suppressor 3112** - A 10% silicone emulsion designed for optimal foam control.

### Vegetable Washing

- **Suppressor 3110** - A 10% active silicone emulsion designed to deliver foam control during the washing and processing of vegetables.
