

# Experience total cooling system management with Ackumen™

**Staying ahead of cooling water system corrosion, scale and microbiological fouling has never been easy.** Hidden problems can mean costly shutdowns, serious health risks and compliance violations. Even today, with conventional sensors and manual testing, you can get too much data and not enough meaningful insight.

Ackumen Cooling Management is a new comprehensive solution that combines our advanced chemistries with 24/7 expert monitoring to deliver actionable insights you need, when you need them. With Ackumen, you can dramatically simplify cooling water management and optimize performance around the clock.

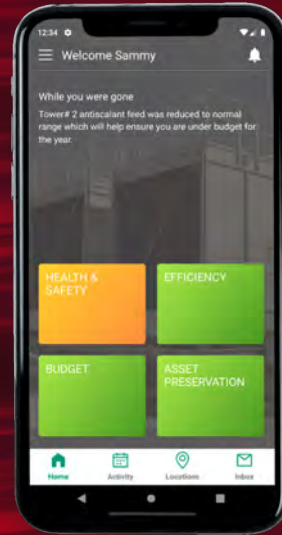

## Expert monitoring and predictive modeling keep you protected.

Ackumen provides 24/7 monitoring and program adjustment through the Insights Lab, a team of water experts trained to deal with events as they happen, assessing alarms and taking the appropriate action. These experts, working closely with data scientists, enable us to see around the bend and analyze patterns that are not visible to the naked eye.

# Simple, easy-to-read, actionable insights.

Ackumen's™ proprietary app keeps things simple. With a quick glance at the four tiles on your screen, you can see how your system is performing in the four key areas that matter most – Efficiency, Health & Safety, Asset Preservation and Budget.

When you need to know more, simply touch a tile and get a comprehensive array of insights about that key area. You'll get visualization graphics and easy-to-understand information all at your fingertips. Rest easy, knowing we're always monitoring and available to talk when you need us.

It's as easy as green, yellow, red.

-  A green tile means all is well.
-  A yellow tile means we detected an issue and corrected it for you – no action from you is needed.
-  A red tile means there is an issue that requires some kind of action or decision from you.

## Smart feeding and inventory management boost efficiency even more.

Ackumen Cooling Management features the only smart feeder on the market, which uses easy-to-handle solid chemistries and interfaces with SMART Inventory, an automatic inventory control system that

uses IoT sensors to monitor chemical consumption and compare to overall closed loop efficiency. We manage inventory so you don't have to.

## It's easy, flexible and affordable.

Ackumen Cooling Management offers:

- A superior end-to-end customer experience, from system set-up to paying invoices
- Complete transparency of your usage and spend
- Flexible, unbundled service and component pricing options, so you get just what you need at an affordable price

- The ability to choose the level of service and support you need to feel comfortable and safe during challenges such as COVID 19

## Total water management.

Brings you a level of control, efficiency, accuracy and ease that makes water management hands off. To learn more, connect with your water management representative.
