

LIQUI PHOS 2000

Liqui Phos 2000 is a concentrated sequestrant used to control corrosion and scale in potable and industrial water systems. Liqui Phos 2000 contains a unique combination of ortho and poly phosphates in an aqueous system that provides optimum protection over a wide pH range. This blend of phosphate works on a threshold activity basis, which means that sequestration can be accomplished at levels far below the stoichiometric amounts.

LIQUI PHOS 2000 APPLICATIONS

Liqui Phos 2000 effectively offers control of:

- Iron and Manganese
- Calcium
- Chlorine Demand
- Lead and Copper Leaching
- Iron Precipitation in Distribution Pipes

LIQUI PHOS 2000 BENEFITS

- A few ppm can inhibit calcium scale formation and tie up undesired metals.**
- When manufactured in Waterloo, Iowa, Liqui Phos 2000 is NSF approved for drinking water treatment as a blended corrosion inhibitor.**
- Liqui Phos 2000 is an aqueous solution to provide easy feeding to the water system, eliminating bag waste and reducing labor expense.**

TYPICAL VALUES

Form: Liquid

Appearance: Clear, Colorless

Odor: Mild

Specific Gravity @ 25°C: 1.375

pH (as is): 4.5

Total Phosphate (%PO₄): 34.0%

Ortho: Poly Ratio (as PO₄): 0.9:1

SHIPPING AND HANDLING

Liqui Phos 2000 can be shipped in 15 gallon, 30 gallon and 55 gallon returnable drums, 220 gallon and 330 gallon returnable tote bins, and bulk tank trucks. Product is manufactured and shipped according to Good Manufacturing Practices (GMP) standards.

APPLICATION RATE

Liqui Phos 2000 is fed depending upon the application (1-10 ppm). Maximum use for NSF/drinking water applications is 30 mg/L.

PRECAUTIONS

Product safety information and handling precautions are contained on the product label and Safety Data Sheet (SDS).

READ AND UNDERSTAND LABEL AND SAFETY DATA SHEET BEFORE PRODUCT USE.
