

7 Steps of Sanitation

Dry Clean

Sweep floors, remove materials, tools, loose or bulk soils and debris from the area.

Step 1

Step 2

Pre-Rinse

The area and equipment surfaces are rinsed until they are visually free of soils.

Soap & Scrub

Scrub to remove the layer of invisible contaminants that may remain after the application of detergent.

Step 3

Step 4

Post-Rinse

Sanitation personnel should work from walls and floor to equipment, in sequence.

Remove & Assemble

Sanitation personnel will ensure that moisture is removed.

Step 5

Step 6

Inspect

Pre-operational inspection provides added assurance that sanitation goals have been achieved in the previous steps.

Sanitize

Sanitize the wall, floor and equipment surfaces.

Step 7
